PLAYGROUND SAFETY SURFACING

Safebond System

Permabond System

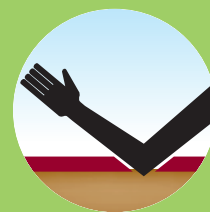

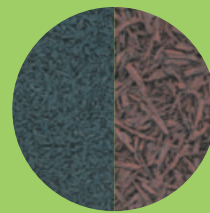

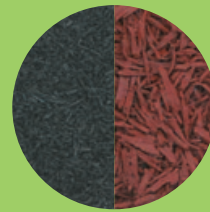

Wet-Pour Systems

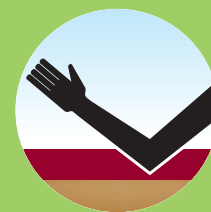

Wet-Pour Systems are virtually seamless, non-slip rubber surfaces installed on-site by our own experienced technicians. The matting is installed standard at a minimum 50mm thickness. The Burgess Matting systems are high quality products both in effectiveness, appearance and durability to provide the ultimate solution for safety in the playground.

Safebond Features:

- Hard wearing 100% recycled rubber surface.
- Surface texture resembles rice grains.
- Allows surface contaminants to be easily removed.
- Available colours: red, green, black, grey and sand.
- Use a Safebond surface where child safety, reduced maintenance and budget are the most important factors.

25mm
Hitting the ground

50mm
No bottoming out

A thicker impact absorption area is good reason to purchase the Burgess system

Permabond Features:

- Topcoat made from 100% synthetic EPDM rubber.
- Surface texture resembles small ball bearing size chips.
- Porous surface allows fast, efficient drainage of large volumes of water.
- Standard colours red and red / black mix.
- 16 permanent vibrant colours available.
- Use a Permabond surface where child safety, reduced maintenance, drainage, appearance and colour are the most important factors.
